DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 – 52 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 - 37 of U.S. Patent No. 6,205,477. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the present Application and U.S. Pat. No. 6,205,477 disclose a load balancing apparatus for distributing a service request to one of a plurality of servers, each one of the plurality of servers being associated with a Domain Name System host name and each one of the plurality of servers having a unique IP address, comprising:

a processor;

a memory, at least one of the processor and the memory being adapted

for:

receiving a server request, the server request being a DNS host name query including the DNS host name;

incrementing a total number of server requests processed by the plurality of servers;

maintaining a number of server requests distributed to each one of the plurality of servers;

selecting one of the plurality of servers using a portion metric assigned to each one of the plurality of servers, the number of server requests distributed to each one of the plurality of servers, and the total number of server requests, the portion metric designating a portion of total server requests to be allocated to the one of the plurality of servers; and

providing an IP address associated with the selected one of the plurality of servers.
